IS YOUR PROJECT LACKING RESOURCES?

In these times of rapidly changing technology, many organizations find themselves short-handed at the most critical times.

What is the best way to develop an idea into a product or meet new project deadlines when you have only enough resources to manage normal day-to-day operations?

- Begin a search for new temporary or permanent staff with the exact combination of skills required.
- Schedule existing staff members to work nights and weekends to meet project needs, creating an atmosphere for low morale, ultimately decreasing productivity.
- Contract a pre-assembled team of professionals that can clarify your requirements, create specifications, develop your project, build your prototype, and guarantee on-time, in-spec, within budget success.

EngResource supplies engineers skilled in hardware and software development to fill the resource gaps in your organization. The difficulty of finding a broad range of skills in a single employee is alleviated by employing **EngResource's** team of specialists. Through close cooperation and professional project management techniques, various segments of your project integrate smoothly into a final result, ensuring the success of your project.

CAPABILITIES

EngResource's capabilities span all aspects of project development, providing you with engineers experienced in the exact aspect of electrical, electronic, or software engineering functions required.

EngResource's skill set encompasses:

- Embedded Systems Design
- Sensor Interfacing
- Real-Time Data Acquisition and Processing
- Motion Control Design
- PCB Design, Layout, and Fabrication
- Software Development
- Hardware Engineering
- Systems Integration
- Systems Architecture Design
- System Testing
- Industrial Packaging
- Hardware/Software Integration Testing
- Formal System Documentation
- Requirements Definition
- Formal Specification Creation
- System Operation/Maintenance Training
- Project Management
- Web Development

REQUIREMENTS

Do you have an idea for a product but aren't sure how best to start, or can't allocate resources to create the requirements documentation?

EngResource helps to define your requirements and turn them into a manageable project.

PROJECT MANAGEMENT

Have you already defined your requirements but need help creating and managing the development project?

EngResource can develop the entire project roadmap and assist you in maintaining the schedule.

TECHNICAL NEEDS

Are you ready to start work on your project but don't have the required skills within your organization? Outsourcing engineering services with **EngResource** will result in substantial cost and time savings.

EngResource's engineering professionals have broad and extensive experience in project development skills, such as;

Developing software modules, designing, prototyping, and testing hardware circuits, verifying product capabilities, creating documentation, and more.

EXPERIENCE

EngResource offers many man-years of successful experience in project and resource management, hardware and software development, and general engineering tasks. This experience and dedication to quality results makes the best use of your resources, assures the most effective project schedule, minimizes your risks, controls your costs, and guarantees project success. Our depth of knowledge in all facets of full life-cycle product development ensures the best possible implementation of your ideas.

EngResource is the best partner for your project solutions.
